You can save a lot of money with Flavored Sprays over the course of the year. Our highly engineered delivery system has been designed to apply a precise amount of flavoring to every meal with no need for measuring cups or tablespoons. Most of the products on the market are pourable and the problem with this is that you may end up applying more than the actual recommended serving size. This increases your cost per serving and reduces the amount of servings in each container. You can see how much you will save over the course of a year in the table below. Each bottle of Flavored Spray will last 3 months with two servings a day (5 sprays per serving)
